Deciduous Fruit and Nut Trees	11
Grape Vines	12
Citrus and Subtropical Fruit Trees	13

This report summarizes the findings of the recent six State survey conducted in California, Colorado, Florida, Illinois, Iowa and New York. The data represent those establishments with sales of \$2,000 or more of all Horticultural Specialties crops. This is comparable with the 1961 and 1959 data. Data for 1959 were issued by the Agricultural Marketing Service under publication number SpCr 6-2(60). Similar data for 1957 and 1958 for these six States plus Michigan, Ohio, Oregon and Texas were issued by the Agricultural Marketing Service under publication numbers SpCr 6-2(59) and SpCr (58), and for 1956 for the same States surveyed this year except for New York under publication number SpCr 6-2(57). Data for 1956 through 1958, however, represent establishments with sales of \$1,000 or more of all Horticultural Specialties crops, as compared with the present \$2,000 minimum sales limitation.

NURSERY PRODUCTS

Production and Sales, 1961 and 1962, and January Inventory,
1962 and 1963 in 6 Selected States

Sales of eight classes of nursery products grown in California, Colorado, Florida, Illinois, Iowa, and New York had a wholesale value of \$54.5 million in 1962, according to the Crop Reporting Board of the United States Department of Agriculture. This is 2 percent below the wholesale value of \$55.6 million reported in these States for 1961.

The plant material classifications covered were coniferous evergreens, broad-leaved evergreens, deciduous shade trees, deciduous shrubs, rose plants, deciduous fruit and nut trees, grape vines, and citrus and subtropical fruit trees. Of the eight classes of nursery products, only broad-leaved evergreens, deciduous shade trees and citrus and subtropical fruit trees showed an increase in total wholesale value of sales for 1962. Broad-leaved evergreens were valued at \$16.9 million; coniferous evergreens at \$11.8 million; citrus and subtropical fruit trees \$8.1 million; rose plants, \$5.8 million; deciduous fruit and nut trees, \$4.7 million; deciduous shade trees, \$4.3 million; deciduous shrubs, \$2.6 million; and grapevines \$0.4 million.

Highlights of the current report are the decreased January 1 inventories in Florida for broad-leaved evergreens and citrus and subtropical fruit trees, due primarily to the December 1962 freeze; the continued expansion of broad-leaved evergreens in California; the increase in deciduous shrubs in Upstate New York; and the reduction of grape vines in Upstate New York. Illinois and New York are down in both inventory and sales of rose plants, while Florida is expanding the production of this item.

California continued to lead the other five States in dollar sales of the 8 classes of nursery products surveyed with a total of \$30.4 million out of the \$54.5 million reported for all 6 States. Iowa and California both showed less dollar sales in 1962 than in 1961, while the other four States showed increased dollar sales over 1961.

STATE SUMMARIES

California: Wholesale value of sales in California for the eight classes of nursery products surveyed in 1962 was down from the 1961 value. Value was down for all products except broad-leaved evergreens, grape vines, and citrus and subtropical fruit trees. Broad-leaved evergreens continue to be the most important class of plant material grown in California, accounting for 38 percent of the dollar sales of the eight classes of nursery products surveyed in the State. Growers of nursery products in California continue to expand their operations for broad-leaved evergreens, grape vines, and citrus and subtropical fruit trees.

Colorado: Dollar sales of the eight classes of nursery products in Colorado, while small, were up again in 1962. Coniferous evergreens, as in the past, accounted for more than half of the sales with deciduous shade trees, deciduous shrubs, and rose plants making up most of the other sales.

Florida: Dollar sales in 1962 of the eight classes of nursery products were only slightly higher than in 1961. Inventory numbers on January 1, 1963 were down sharply from January 1, 1962 for citrus and subtropical fruit trees and broad-leaved evergreens, due primarily to the December 1962 freeze. The freeze also curtailed deliveries at the end of the year for some nursery products. The number of rose plants sold during 1962 was more than double the 1961 sales and inventories on January 1, 1963 were 80 percent larger than a year earlier. The growers of nursery products are expanding their rose plant production in line with a large increase in the production of cut roses. Sales of coniferous evergreens, broad-leaved evergreens, deciduous shrubs, and deciduous fruit and nut trees were down in 1962 in Florida.

Sales of the other 4 nursery products were up with citrus and subtropical fruit trees showing the greatest increase despite curtailed deliveries in December of 1962. Sales of nursery products that were frozen in December will be down in 1963.

Illinois: Growers of the eight classes of nursery products reported the 1962 total sale value at \$5,302,400, up 12 percent from 1961. The greatest increase in sales value was shown for deciduous shade trees, up \$351,000 from 1961, due entirely to an increase in the average price per tree. Value of coniferous evergreen sales was up from 1961, as the number of plants sold was up, more than offsetting the effect of a lower price for conifers in Illinois in 1962. Coniferous evergreens made up nearly one-half the total value of nursery products sold, followed by deciduous shade trees, deciduous shrubs, and deciduous fruit and nut trees. January 1, 1963 inventory numbers were up from 1962 for coniferous evergreens, deciduous shrubs and deciduous fruit and nut trees.

Iowa: Total sales for the eight classes of nursery products surveyed in Iowa was down 9 percent from 1961. The decrease was all in coniferous evergreens and deciduous shrubs as all other nursery products were either the same as 1961 or increased. January 1, 1963 inventories are up for deciduous shade trees and deciduous shrubs, indicating that an increase in sales may be expected for these products in 1963. Coniferous evergreens, deciduous shade trees, deciduous shrubs, and deciduous fruit and nut trees account for 99 percent of the total value of sales in Iowa.

New York: Total wholesale value of sales of the eight classes of nursery products surveyed in New York was slightly larger than that of 1961. A 10 percent increase on Long Island more than offset a decrease in value in the remainder of the State. On Long Island the increase was due to increased sales for coniferous evergreens, broad-leaved evergreens, and deciduous shade trees, with most of the increase being for broad-leaved evergreens. Coniferous evergreens and broad-leaved evergreens made up more than 75 percent of the total dollar sales in 1962. Increases in January 1, 1963 inventories for coniferous evergreens and broad-leaved evergreens indicate there may be an increase in future sales of these products. In the Upstate districts, all products except deciduous shrubs, showed a decrease in dollar value, with rose plants and grape vines showing the sharpest declines. Grower inventories indicate that an increase in deciduous shrub sales may be coming but that grape vine sales will probably be down. The decrease in locally grown rose plants appears to be continuing.

DEFINITIONS

The estimates in this report relate to sales by commercial producers. A commercial producer is defined as one who produces and sells \$2,000 or more of nursery products, cut flowers, bulbs, seeds, and bedding, vegetable, flowering and foliage plants in one year, excluding governmental and reforestation nurseries. Only commercial producers growing one or more of the eight nursery classifications were included in this report. All value figures are at "gross wholesale" and deductions have not been made for selling commissions and transportation costs. Retail sales in each State were converted to their equivalent wholesale value using average wholesale prices reported by growers having about the same size operation.
